## Condensing Table™

# What Is Carbon Fiber?

Carbon fiber is a material consisting of thin, strong crystalline filaments of carbon, essentially carbon atoms bonded together in long chains. The fibers are extremely stiff, strong, and light, and are used in many processes to create excellent structural materials. Carbon fiber offers a variety of benefits including:

- High stiffness and stiffness-to-weight ratio
- High tensile strength and strength-to-weight ratio
- High-temperature tolerance with special resins
- Low thermal expansion
- High chemical resistance

Carbon Fiber Plain Weave

Carbon Fiber Twill Weave

Carbon fiber is extremely stiff, strong, and light. It is typical in engineering to compare the properties of materials in terms of their strength-to-weight ratio and stiffness-to-weight ratio, particularly in structural design, where added weight may translate into increased life cycle costs or unsatisfactory performance.

- Low thermal expansion
- High chemical resistance

# CARBON FIBER CATALOG

OUR PRODUCTS ARE PROUDLY  
MADE IN ATLANTA, GA USA

WE USE ONLY GENUINE MATERIALS  
THAT ARE 100% RECYCLABLE:

- BRASS
- BRONZE
- COPPER
- STAINLESS STEEL
- NATURAL STONE
- WOOD

OUR TEAM OF TALENTED DESIGNERS  
WILL CUSTOMIZE ANY PRODUCT  
TO YOUR SPECIFICATIONS.

ALL RECEPTACLES COME  
STANDARD WITH LEAK-PROOF  
FIBERGLASS LINERS
